Completed: Fri, 30 Oct 2026 09:20:00 GMT

AUDITED WEB PROPERTY
https://example-dental-clinic.com

Target Market: Dentist
Location: Seattle, WA

78
OVERALL SCORE
out of 100

EXECUTIVE EVALUATION

This is a deterministic, schema-valid mock audit report for https://example-dental-clinic.com. Technical health is sound, but improvements in sitemap declaration, metadata boundaries, and schema markup will unlock immediate search visibility gains. All scores and recommendations adhere strictly to the Phase 6 contract.

> **Analytical Notice:** The Overall SEO Score is Edgelink Technology's analytical assessment based on automated crawl and heuristic signals. It reflects technical health and best-practice adherence, and does not guarantee search engine ranking positions or organic search traffic.

WEIGHTED CATEGORY SCORE BREAKDOWN

CATEGORY	WEIGHT	SCORE & PROGRESS	DESCRIPTION & KEY SIGNALS
Technical SEO	25%	85/100	Robots.txt, sitemaps, indexing prerequisites, canonicals
On-Page SEO	25%	68/100	Title tags, meta descriptions, headings, images, link topology
Content Quality	20%	85/100	Visible text depth, word volume, readability, thin content defense
Core Web Vitals	15%	61/100	Page performance, render-blocking resources, mobile layout stability
Schema & Metadata	15%	88/100	Structured data, Schema.org entities, JSON-LD validity

HIGH-IMPACT QUICK WINS

Images detected without descriptive alt attributes.

Add concise, contextual alt attributes to all content images describing their visual subject.

Check: Inspect HTML elements: querySelectorAll('img:not([alt])').length === 0.

Missing Schema.org LocalBusiness structured data markup.

Inject a JSON-LD structured data block with @type: 'LocalBusiness', name, telephone, and address.

Check: Test URL against Schema.org validator or Google Rich Results Test API.

IDENTIFIED CRITICAL & IMPORTANT FINDINGS

#1 Missing or Inaccessible XML Sitemap

CRITICAL Technical

No XML sitemap was discovered at the standard /sitemap.xml endpoint or declared in robots.txt.

```
Evidence: Checked sitemap endpoint returned status 200.
```

Recommended Fix: Deploy a valid XML sitemap and reference it with a Sitemap directive in robots.txt.

#2 Suboptimal Meta Description Length

HIGH OnPage

The meta description is either missing, truncated, or outside the recommended 120-160 character boundary.

```
Evidence: Current length: 105 characters.
```

Recommended Fix: Craft an engaging meta description between 120 and 158 characters including the primary target keyword.

#3 High Largest Contentful Paint (LCP)

MEDIUM CoreWebVitals

The Largest Contentful Paint exceeds the recommended Google threshold of 2.5 seconds.

```
Evidence: LCP measurement: 4.2 s.
```

Recommended Fix: Preload hero image assets and configure edge caching on the primary document response.

STRATEGIC SEO RECOMMENDATIONS ROADMAP

#	PRIORITY	FINDING & RECOMMENDED ACTION	IMPACT	EFFORT
1	CRITICAL Technical	**Robots and indexation instructions lack automated sitemap discovery.** Append 'Sitemap: https://yourdomain.com/sitemap.xml' to robots.txt. **Verification Test:** Verify curl -s https://yourdomain.com/robots.txt | grep -i Sitemap.	HIGH	LOW
2	HIGH OnPage	**Heading structure skips semantic hierarchy.** Ensure exactly one H1 element exists followed by sequential H2 and H3 elements. **Verification Test:** Verify document.querySelectorAll('h1').length === 1.	HIGH	MEDIUM
3	MEDIUM Content	**Main body content depth is lower than median ranking competitors in this vertical.** Expand core service explanations with dedicated FAQ sections, client testimonials, and technical specifications. **Verification Test:** Measure body word count exceeding 600 words via document text node extraction.	MEDIUM	MEDIUM

REPORT METHODOLOGY & ANALYTICAL LIMITATIONS

- **Crawl Scope:** This report represents single-page HTML metadata extraction and heuristic technical analysis captured via Cheerio at the time of the audit. Dynamic client-side single page apps (SPA) rendered exclusively in browser JavaScript may require secondary DOM inspection.
- **Deterministic Weighting:** Category scores are computed deterministically (Technical 25%, On-Page 25%, Content 20%, Core Web Vitals 15%, Schema 15%) per Edgelink platform specifications. No scores are fabricated or randomly generated.
- **External Providers:** Core Web Vitals and Search Console metrics reflect data available at audit time. Where provider keys are unconfigured or unavailable, proxy crawl heuristics are applied without fabricating fictitious external provider metrics.
